

AMENDMENTS TO THE CLAIMS

1-24. (Cancelled)

25. (Currently amended) A heat-treating method for a packaging product, comprising:
providing a packaging product formed by enclosing a content material within a
packaging material, and

heat-treating the packaging product with hot water;

wherein the packaging material has a multi-layer structure including an outer surface
layer of at least one hydrophobic resin selected from the group consisting of polyolefins,
olefin copolymers, aromatic polyesters, aromatic polyamides, aliphatic polyamides, and
styrene resins, and an inner layer of ~~hydrophilic gas-barrier resin selected from the group
consisting of ethylene-vinyl alcohol copolymer, polymetaxylylene adipamide and glycolic
acid (co-)polymer~~, and wherein

the hot water is caused to contain ~~a water-soluble compound, and the water-soluble
compound is an inorganic electrolyte~~, thereby preventing opalescence of the inner layer of
glycolic acid (co-)polymer during the heat-treatment with hot water.

26. (Previously presented) The heat-treating method according to Claim 25, wherein the
hot water has a temperature of 60-100°C to effect a boiling heat-treatment.

27. (Previously presented) The heat-treating method according to Claim 25, wherein the
hot water has a temperature exceeding 100°C to effect a retort heat-treatment.

28. (Currently amended) The heat-treating method according to Claim 25, wherein the
hot water contains the inorganic electrolyte~~water-soluble compound~~ at a concentration
exceeding 0.1 wt.%.

29. (Currently amended) The heat-treating method according to Claim 25, wherein the
hot water contains the inorganic electrolyte~~water-soluble compound~~ at a concentration of at
least 1 wt.%.

30. (Cancelled)

31. (Currently amended) The heat-treating method according to Claim 25, wherein the inorganic electrolyte~~water-soluble compound~~ is a water-soluble inorganic salt.

32. (Currently amended) The heat-treating method according to Claim 31, wherein the water-soluble inorganic salt~~compound~~ is a chloride selected from the group consisting of sodium chloride, magnesium chloride, and potassium chloride.

33. (Currently amended) The heat-treating method according to Claim 32, wherein the water-soluble inorganic salt~~compound~~ is sodium chloride.

34-42. (Cancelled)

43. (Withdrawn) A packaged product, which has been heat-treated by a heat-treating method according to Claim 25.

44. (Withdrawn) A packaged product according to Claim 43, wherein the heat-treated packaging material has a haze below 20%.

45. (Withdrawn) A heat-treated packaged product, comprising a heat-treated packaging material having a multi-layer structure including an inner layer of a hydrophilic gas-barrier resin layer selected from the group consisting of ethylene-vinyl alcohol copolymer and glycolic acid (co-)polymer, and a content material enclosed within the packaging material, wherein the heat-treated packaging material has a haze below 20%.

46. (Withdrawn) A packaged product according to Claim 45, wherein the hydrophilic gas-barrier resin is ethylene-vinyl alcohol copolymer.

47. (Withdrawn) A packaged product according to Claim 45, wherein the hydrophilic gas-barrier resin is glycolic acid (co-)polymer.

48. (Withdrawn) A packaged product according to Claim 43, wherein the packaged material has been subjected to a heat-shrinking treatment during the heat treatment.
